- 1.2 With Aluminum Shell for a good heat dissipation, suitable for board mount
- 1.3 Thin & lightweight body with big power rating
- 1.4 Application: Power Supply, Adapter, Machine

2. Part No. System

The standard Part No. includes 14 digits with the following explanation:

2.1 For Power Dissipation Mount Fixed Resistors, these 4 digits are to indicate the product type but if the product type has only 3digits, the 4th digit will be "0"

Example: PDM0=PDM type;

 $2.2.5^{th} \sim 6^{th}$ digits:

 $1W\sim16W \ (\ge 1W)$

Wattage	5	10
Normal Size	5W	AW

2.2.1 For power rating of 1 watt to 16 watt, the 5^{th} digit will be a number or a letter code and the 6^{th} digit will be the letters of W.

Example: 5W=5W

- 2.2.2 For power rating between 20 watt to 99 watt, the 5^{th} and the 6^{th} digit will show the whole numbers of the power rating itself Example: 25=25W; 35=35W; 50=50W; 85=85W
- 2.3 The 7th digit is to denote the Resistance Tolerance. The following letter code is to be used for indicating the standard Resistance Tolerance.

 $J=\pm 5\%$ $K=\pm 10\%$

- 2.4 The 8th to 11th digits is to denote the Resistance Value.
- 2.4.1 For the standard resistance values of E-24 series, the 8th digit is "0", the 9th & 10th digit are to denote the significant figures of the resistance and the 11th digit is the numbers of zeros following.

Example:

$$012J=1.2Ω$$
 $0120=12Ω$ $0273=27KΩ$

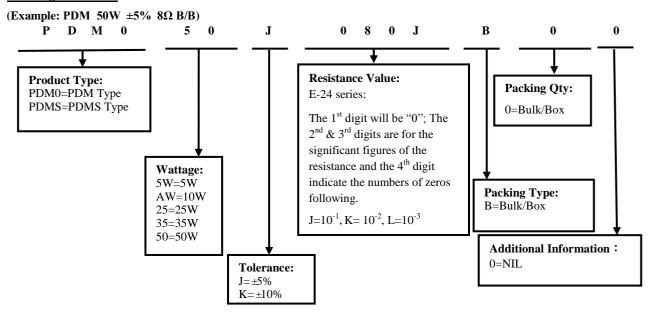

- 2.5 The 12th, 13th & 14th digits.
- 2.5.1 The 12th digit is to denote the Packaging Type with the following codes:

B=Bulk/Box

- 2.5.2 The 13th digit is normally to indicate the Packing Quantity, This digit should be filled with "0" for the Cement products with "Bulk/Box" packing requirements.
- 2.5.3 For some items, the 14th digit alone can use to denote special features of additional information with the following codes or standard product

Example: 0= standard product

5. Derating Curve

5.1 Voltage rating:

Resistors shall have a rated direct-current (DC) continuous working voltage or an approximate sine-wave root-mean-square (RMS) alternating-current (AC) continuous working voltage at commercial-line frequency and waveform corresponding to the power rating, as determined from the following formula:

$$RCWV = \sqrt{P \times R}$$

Where: RCWV = rated dc or RMS ac continuous working voltage at commercial-line frequency and waveform (VOLT.)

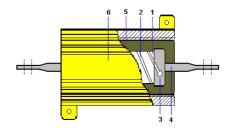

P = power rating (WATT.) R= nominal resistance (OHM)
